

Breathable membrane solution for pipes

Solution with a ventilation hole & breathable membrane

Drinking water pipes need to be closed by sealed plugs to prevent inner contamination from microorganisms, dust, sand or soil. Our solution with the new breathable membrane provides full protection of pipe ends, at the same time allowing air to circulate through the vent hole.

- Sizes: **40 mm up to 400 mm**
- **Over 50 products** available in NA & NC range
- **Water, snow & dust resistant**
- The membrane allows **air circulation** and cannot be degraded or broken by UV light or other contaminations

Pipe protected **without** the membrane (dirt visible)

Pipe protected **with** the membrane (dirt not visible)
